# The Energy Story

- Forms of Energy .................................................. 75
- Energy Transformations ........................................ 76
- Law of Conservation of Energy .............................. 77
- Chemical Energy .................................................. 78
- Energy from Light and Other Forms of Electromagnetic Radiation ................................. 80
- Nonrenewable Energy Sources ......................... 81
  - Petroleum ...................................................... 84
  - Coal ............................................................. 85
  - Natural Gas .................................................... 87
- Renewable Energy Sources ............................... 88
  - Solar Energy .................................................. 90
  - Biomass ......................................................... 90
  - Water Power .................................................. 90
  - Wind ............................................................ 90
  - Geothermal Reserves ..................................... 90
  - Oceans .......................................................... 90
- Nuclear Fission as an Energy Source ................. 94
- Energy from Food ............................................... 94
  - Carbohydrates ................................................ 95
  - Fats .............................................................. 95
  - Proteins ........................................................ 95
- An Energy Summary ............................................ 97

# What is a Chemical Reaction?

- Recognizing Chemical Changes .......................... 95
- Writing Chemical Equations ............................... 98
- The Speeds (or Rates) of Chemical Reactions ........ 101
  - Concentration ............................................... 101
  - Surface Area .................................................. 102
  - Temperature ................................................... 102
  - Catalysts ....................................................... 103
- Reaction Types .................................................... 103
  - Combination Reactions .................................. 103
  - Decomposition Reactions ............................. 104
  - Displacement Reactions .................................. 105
  - Exchange Reactions ....................................... 107
### Chemical Opposites: Acids and Bases

- What Are Acids and Bases? 109
- Is a Solution Acidic or Basic? 110
- Strength of Acids and Bases 111
- Neutralization Reactions 114

### The Chemistry of our Environment

- The Crust—The Solid State 117
  - Silicate Minerals and Their Uses 118
  - Metals and Their Minerals 120
- The Hydrosphere—The Liquid State 121
  - Properties of Water 122
  - The Water Cycle 126
- The Atmosphere—The Gaseous State 128
  - Properties of Gases 129
  - The Relationships Among Volume, Pressure, and Temperature of Gases 130
    - Temperature and Volume 131
    - Volume and Pressure 131
    - Pressure and Temperature 131
- What Is Clean Air? 132
- What Is Polluted Air? 133
  - Carbon Monoxide 134
  - Nitrogen Oxides 135
  - Sulfur Dioxide 135
  - Hydrocarbons 136
  - Ozone 136
  - Particulates 137
  - Radon 137
  - Carbon Dioxide 138
## Appendices

Appendix A: National Science Education Standards  
Appendix B: Recommended Resources  
Appendix C: Common Chemicals In and Around the Home  
Appendix D: The Chemical Locator—A Cross Reference of Chemicals by Common Name  
Appendix E: Equivalents of Common Kitchen Measures  
Appendix F: Mass Equivalents of Common Solids  
Appendix G: Answers to “What do you think?”  
Appendix H: Answers to Puzzles
