### \* Permission to Photocopy

For classroom use, purchasers of this manual have permission to make transparencies from the masters in Appendix A (pages 9–14). Other unauthorized uses of materials or information in this manual will be considered as violations of copyright.

### Additional Materials Available

Enhance your memory metal demonstration! Additional materials are available from ICE that will allow you to expand on this demonstration of memory metal. Of course they are affordable!

- Let your students participate in a hands-on demonstration of memory metal. Sets of 10 three-inch pieces of memory metal wire (Nitinol™) allow them do this.
- Create your own pieces—start with untreated memory metal wire, available by the foot, and then experiment.

See the ICE website at <http://ice.chem.wisc.edu> for ordering information.
