| Table of Contents.....                             | v    |
| About the Solar Cell Kit.....                      | 1    |
| Materials and Supplies .....                       | 3    |
| Suggested Teaching Strategies.....                 | 7    |
| Photosynthesis .....                               | 10 * |
| Human Impact on Earth.....                         | 15 * |
| The Nanocrystalline Dye Sensitized Solar Cell..... | 17   |
| Assessment and Discussion .....                    | 23   |
| Before You Begin the Laboratory Experiment .....   | 26   |
| Laboratory: Creating a Solar Cell                  |      |
| Introduction and Background.....                   | 27 * |
| Objectives of Experimental Procedure .....         | 29 * |
| Equipment and Materials List.....                  | 29 * |
| Safety and Handling.....                           | 31 * |
| Day One, Part One                                  |      |
| Preparing the Titanium Dioxide Suspension .....    | 33 * |
| Day One, Part Two                                  |      |
| Deposition of the Titanium Dioxide Film.....       | 34 * |
| Day One, Part Three (Optional)                     |      |
| Preparing Chlorophyll Dye.....                     | 37 * |

|  |      |
|--|------|
| Day Two, Part One  |      |
| Staining the Titanium Dioxide with Anthocyanin Dye.....          | 38 * |
| Carbon Coating the Counter Electrode .....                       | 40 * |
| Day Two, Part Two  |      |
| Assembling the Solar Cell Device .....                           | 41 * |
| Measuring the Electrical Output Characteristics .....            | 42 * |
| Going Further  |      |
| Constructing a Solar Module.....                                 | 46 * |
| Demonstrate the Power Produced by the Solar Cell or Module ..... | 47 * |
| Debugging the Solar Cell .....                                   | 47 * |
| Data Collection .....  | 48 * |
| Results .....  | 51 * |
| Recycling Materials; Care of Slides.....                         | 51 * |
| Conclusion.....  | 52 * |
| Questions .....  | 53 * |
| Definition of Terms .....  | 54 * |
| Works Cited.....   | 58   |
| Appendix One: Constructing an I–V curve with one multimeter..... | 60   |
| Appendix Two: Transparency Masters .....                         | 62 * |

### \* **Permission to photocopy**

For classroom use, the purchaser of this kit has permission to make copies of the sections marked above with an asterisk\*—Photosynthesis, Human Impact on Earth, Laboratory, Definition of Terms—as well as to make transparencies from the masters found in Appendix Two.

### ➔ **Care of your kit components**

The conductive (tin dioxide coated) glass slides in this kit have been carefully packed in a *protective* glassine envelope. You should continue to handle them carefully so that their coating does not become scratched or chipped. Use the protective glassine envelope to store the glass slides before and after coating the conductive side of the slide with titanium dioxide (TiO<sub>2</sub>).

Detailed directions for recycling, checking, and reusing the TiO<sub>2</sub>-coated slides and other kit materials can be found on pages 51–52 of this manual.
